# ARTIFICIAL INSEMINATION

## CLEANING WIPES

Wipes to clean the udders and the vulva of the sow before the artificial insemination. Useful for the stimulation of milk production and to reduce the time of milking. Prevents ascending contaminations in the reproductive apparatus. Suitable also for the cleaning of the operator's hands. Only for external use. Bucket of 1000 wipes. Measures: 20 x 20 cm.

COD. 4980030

| CODE    | DESCRIPTION    |
|---------|----------------|
| 4980030 | Cleaning wipes |
| 4980031 | Wipes refill   |

## VULVA CLEANSER

No spermicidal cleansing solution that allows for a fast cleaning of the vulva before the insemination. Apply a few sprays on the part to be cleaned and dry up with a clean paper cloth. In most cases this operation avoids the occurrence of ascending infections in the sow reproductive apparatus. Available in two different packages.

COD. 1907078

COD. 1907079

| CODE    | DESCRIPTION                  |
|---------|------------------------------|
| 1907078 | Vulva cleanser in bottle 1lt |
| 1907079 | Vulva cleanser in tank 5 lt  |

## BOARMATE SPRAY

Spray with boar odour to detects sows heat, or use as an extra stimulant during insemination. Spray maximum for 2 seconds near the nose of the sow.

COD. 1907069

| CODE    | DESCRIPTION           |
|---------|-----------------------|
| 1907069 | Boarmate spray 250 ml |

## LUBRICANTS

No spermatoxic gel to lubricate the catheter before inserting it. It also has a bacteriostatic power, therefore it reduces the bacterial charge in the reproductive apparatus. It can be used by inserting 10 - 15 ml in the cervix after the insemination, thus reducing the risk of seminal material rejection. Available also lubricant oil, cheap and easy to use. Available in different packages.

COD. 3946063

COD. 3946062

| CODE     | DESCRIPTION                      |
|----------|----------------------------------|
